So, what can we say about Photoshop? Even in the era of very powerful Mac computers, it doesn't get any simpler to edit. Even the RAW system in Elements 13 and 14 is so simple it's a pleasure to work with. (This is not a plug for Elements. I would also argue that Photoshop and Elements are different animals.) There's an option to try an image in a bunch of different versions in the Editor window. In my testing, there's one or two more options for different versions than MyColors and Camera Raw. In general, I've found it's easier to tweak settings in an open, source image than an "Into" version. For a quick whirl and a permanent "keeper" (if you pick the version carefully), it's easier to see if your image will work as planned before starting. That's a slam-dunk reason for using an open-ended "Into" version. On the Mac, there's a great layering caching feature that makes limited changes to a few layers even work better. (In Elements 13, you can use layer visibility icons at the upper corners of an image layer. In Photoshop, you can use the layer visibility icon (the layer icon with a specific brushstroke). It's so easy to distinguish an open, intact layer that I still haven't seen something like that in other applications on any platform I've used. Yes, there are layers in Elements 13 and 14, but there's no caching that I've seen yet. In the final results I may be using one or two intact layers, for my own peace of mind and because there's no layer caching yet, but I am not loath to use more than a few layers.) You can get a ton more out of Elements using layer masks in the same way you can using masks in Photoshop CS6. You can also use masking to get into an image and really work at the sublayer level. You can make any kind of adjustment you want as an image sits open. You can also make an adjustment without potentially altering earlier settings and without burning time from Layer Masks. Mask adjustments let you selectively adjust areas that might not respond as you'd expect. If you know exactly what's going on in your final image, and you know how your brand's logo will look, you can pinpoint it with mask-based adjustments.

Universal Photoshop CC 2018 is a complete software solution for all your creative and innovative needs. It offers some of the best Photoshop tools, offering options to develop from photo editing to processing. This new platform enables me to test it out with some of the features coming in Photoshop CC which are supposed to be Unity based and will be a desktop application only. I am loving the interface change. I am also really looking forward to letting the AI make some of the decisions on my photo. I will test out Sharpening (+0.2) - really loving the new presets and ease of use. I am looking forward to getting my hands dirty with Brush Masking and Content Aware fills. With the latest versions of Photoshop, you have multiple UI options. Depending on what version and edition you're using, Photoshop has different options for tweaking and arranging your image. You can use the options in Photoshop's menus, or spend more time zooming in and out with new 3D camera view tools. The process video shows off some of the cool new 3D camera aids in Photoshop CC 2018. For example, you can play around with your triangle plane, escape, and move the camera. All of this is done by using the keyboard. You can also move the camera by using the Spacebar or arrow keys. However, through the use of Apple's Long Look technology, while the camera is being held down, Photoshop CC still allows you to move it by releasing the spacebar and the arrow keys. You'll be able to use this new feature in the coming future. With the 3D Camera view, you can navigate your view with the keyboard, and even fire up Photoshop's powerful selection tools from anywhere. In this video we take a look at the 3D viewfinder. You'll even see how the new 3D Camera view changes the UI as it relates to the different editing and retouching tools. You can use your mouse with the 3D view tool as well as the 3D camera view tool. You can also use the 3D view to view the layout of your page through the use of the 3D viewfinder. The 3D viewfinder shows the 3D view with a grid on the left. You can select a point with your cursor on the grid and then click and drag to move the lens along one direction. This will allow you to make adjustments to your image in all three dimensions.
