The easy thing I'd like to see is the option to create a new folder on the fly. Let me select a bunch of images and then while I'm in the Organizer create a new folder. For example, I have a set of images that I use for photo galleries and want to divide them into different galleries. I can't figure out how to divide the images in a way that keeps all the keywords, subjects of the images and names. The new AE5 is starting to do this nicely (select an image and then with the crop tool select a portion and move it to a new group). In my eyes, having one setting for this and auto-creating a folder makes sense. —Scott Swan I love the new user interface. It's so easy to view, select and organise your photos into folders. It moves at a great speed when you add or delete files and it's easy to delete entire folders. I also liked the addition of a library view where you can view all files without having to look through folders. The only drawback is that you can't move or rename files while in this mode. I thought this irked me at first but once I got over it, I found it very beneficial. When you are in a folder view it's easy to just scroll through the files you want. I kept my main files without any folders by creating a new background folder in the library view. I just added the files into this and move them around the view. I also like the new drawing tools – it's so easy to draw shapes and use the line tools. The tool options are there and you can select a variety of different line types. The only drawback is that you can only delete objects by holding the line tool while pressing the delete key. It would be nice if you could just hold the tool and point to the objects you want to delete. —Andrew
